

# DRY FERTILIZER SUPPORT BRACKETS

Simon Innovations Dry Fertilizer Brackets utilize a full saddle design to fully support the entire base of the hopper. This design transfers the weight directly to the planters frame.

Our brackets remove the flexing that cause the stock brackets, fiberglass hoppers and auger-drive components to crack, fatigue and/or wear out prematurely.

Our Fertilizer Brackets are engineered to handle the strain from adding 400+ pounds of extra weight from using hopper extensions.

The Simon Innovations Difference

- Engineered to handle the extra weight and stress caused from adding hopper extensions.
- Utilizes all factory mounting holes and geometry.
- Easy, bolt-on installation.
- Allows bin to pivot forward for easy installation and clean out.
- Laser cut and CNC bent to ensure a precise fit.
- Gusseted and 100% welded joints.
- Powder coated for a long lasting durable, UV resistant finish
